## WEBINAR: eSight application

- When impedance and imagery technologies work together to address the questions of Immuno-Oncology

As cell-based assays, immuno-oncology studies require a very high level of understanding, and quality control at each step of their development is crucial. The Agilent xCELLigence platforms are providing a real time readout of the cell therapy assays which leads to a better understanding on the cells' behaviour and allows to avoid any risk of information loss in comparison to more standard time-point assays. In this webinar, we will highlight the benefits of the real time measurement, focusing on the xCELLigence eSight system.

Merging the impedance-based capability to a powerful imaging system, the eSight will not only provide the cell killing efficiency as results, but it will also address the questions on the involved mechanisms of action.

**When:** Thursday, March 25, 13:00 - 14:30

**Where:** Online Webinar via Microsoft Teams - you will receive a link prior to the meeting

**Who:** Emeric Deruy PhD, Channel Partner Manager Benelux & Nordic Countries European Field Application Scientist

Sign up before March 21 by sending an email to Product Specialist, ELISA & Flow Cytometry, Christine Mark at [cma@ahdiagnostics.dk](mailto:cma@ahdiagnostics.dk)
