AH diagnostics

Celebrating 40 years of immunology innovation

Media & sera for your project

The right environment for reliable cell growth.

Save 50% on classic media - prices from 35 DKK!

Core media:
- DMEM
- MEM
- RPMI-1640
- IMDM
- McCoy's 5A
- Ham's F-10/F-12
- Leibovitz's L-15

Available Options:
- With or without L-glutamine or stable L-glutamine ala-glu
- With or without phenol red
- Liquid or powder formats
- Serum-free and reduced serum formulations

Sera:
Biological support for demanding Cell cultures.
- Fetal Bovin serum (FBS)
- Mutiples origins and grades
- GMP and research use
- Human serum
- Animal serum (horse, goat, sheep, rabbit)
- Processing options
- Heat-inactivated
- Dialysed
- Low-IgG
- Exosome depleted
- Gamma-irradiated

Matrigel to improve your cell culture environment

Matrigel Marstermix

50 vials	5 vials

Free vials with purchase of select products!

CORNING

Corning extracellular matrices (ECMs) enable researchers to mimic in vivo environments for 2D and 3D cell culture applications.

This campaign can be ordered through phone and email only

We can help you find the right solution for your project

The smarter way to count cells

DeNovix

CellDrop™ cellcounter
Different options available

Save 25% on all DeNovix instruments

	Fluorescence & Brightfield	Brightfield Only
Standard Magnification *4X Objective* *4 - 400 µm Cells*	**CellDrop FLi** Tissue Culture Primary Cells Isolated Nuclei Hepatocytes GFP Fixed Samples Plant Cells Insect Cells	**CellDrop BF** Tissue Culture Low Debris
High Magnification *10X Objective* *2 - 20 µm Cells*	**CellDrop FLxi** Stem Cells Yeast Other Small Cells	**CellDrop BFx** Yeast Low Debris Other Small Cells

DeNovix CellDrop™ eliminates disposable slides with patented DirectPipette™ technology, providing fast, accurate cell counting and viability analysis. Advanced AI-powered apps support challenging samples, including organoids, stem cells, and apoptosis assays.

Affordable performance for reliable data

ELISA kits from RayBiotech
Choose between +6.000 kits

RayBiotech
Empowering your proteomics

For all your sensitive and quantitative detection needs. Ideal for measuring low antigen concentrations, analyzing cellular regulation, conducting quality control studies.

Save 25% on all ELISA kits from RayBiotech

This campaign can be ordered through phone and email only

Versatile instruments for your ELISA workflow

Agilent
Trusted Answers

Automate your ELISA workflow

Extend your workflow beyond simple dispense and aspirate routines.405 TS strip washer from Agilent Biotek for easy and consistent automated washing of ELISA, Cell-based assays, and Biomagnetic particle separation assays.

- Application versatility: ELISA, cell- and bead-based assays
- Color touch screen makes programming quick and easy
- Easy touch operation for washing full or partial plates
- Reliable and safe: liquid level sensing available

An affordable, high-quality ELISA microplate reader

800TS filter-based absorbance plate reader for reliable reading of ELISA, protein assays, Cytotoxicity assays, and Kinetic ELISA.

- Versatile for many applications, including ELISA, protein, and other endpoint assays, including kinetics and cell-based assays
- Color touchscreen for quick programming and simple operation
- High precision and accuracy for reliable results

Keep your BioTek instrument performing at its best

Your BioTek instrument plays a critical role in reliable research results. With a service agreement from AH diagnostics, you benefit from preventive maintenance, expert support, and documented performance.

Benefits include:

- Increased uptime
- Optimal instrument performance
- Fast access to technical support
- Predictable service costs

Let us handle maintenance, so you can focus on your science.

Cutting-edge spectral flow cytometry solution

Demo available

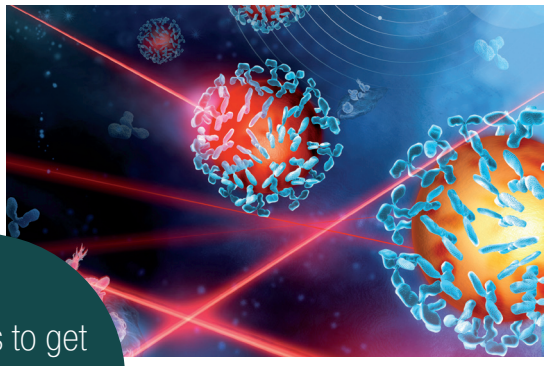

The NovoCyte Opteon, developed by Agilent Technologies, is an advanced spectral flow cytometer designed for high-dimensional cellular analysis.

- With up to 5 lasers and 73 detectors, it can detect over 40 markers in a single sample
- Its proprietary optics and sensitive electronics allow for high-resolution analysis, including particles as small as 80 nm.
- The system features NovoExpress software, automation-ready hardware, and a flexible autosampler
- Recognized with the 2024 Select Science award for Best New Drug Discovery & Development Product
- The Novocyte Opteon is ideal for immunophenotyping, small particle detection, and complex

What is better than one scientist? A whole team!

Panel design made for your project

In collaboration with our partner Thermo, we offer you specialized expert support when building or optimizing your multicolor panel, with this service.

It includes a review by two scientists to help ensure you have minimal spillover and increased resolution, and go-to antibodies and reagent to help with success on your flowcytometer.

Benefits of your free panel design service include:

- Quick turnaround between first draft and final panel design
- Final panel design rewieved by two scientists
- Antibody and reagent recommendations

Contact us to get started on your panel design

Get more confidence from your flow cytometry experiments.
Microspheres provide reliable controls for fluorescence compensation or unmixing, helping you achieve consistent and accurate results.

40 Years
Your Science, Our Focus

AH Diagnostics marks 40 years of supporting and advancing immunology. Throughout this journey, our mission has remained constant: to deliver instruments and solutions that enhance workflows, improve accuracy, and strengthen scientific outcomes, backed by qualified specialists dedicated to supporting our customers every step of the way.

To celebrate this jubilee, we have collected exclusive discounts and some of the essential products you may need in your lab or workflow. If you want help finding the right solution, protocol or just want sparing, reach out to us and we will help you with your project.
